For information contact Tim Reitz at **814-534-9764** or **treitz@conemaugh.org**

As you know, most ALS Services require a Paramedic to possess ACLS (Advanced Cardiac Life Support). But what about the EMT or other BLS providers who is there as part of the emergency care team? This course, ACLS for the EMT, is designed to provide the BLS provider with the knowledge base that will not only make them feel more comfortable in the ALS setting, but be able to support the ALS provider by becoming a more knowledgeable team member.

This course will build upon your BLS experience and expand your knowledge regarding some cardiac pharmacology, cardiac electrophysiology, airway management, and electrical therapy. The course will emphasize the importance of basic life support to patient survival; the integration of effective basic life support with advanced cardiovascular life support interventions; and the importance of effective team interaction and communication during resuscitation.

This course is a total of 8 hours in duration. This course does not expand your current scope of practice nor does it certify you in ACLS. This is a continuing education program produced by the AAOS and Jones and Bartlett Publishing.

*This course is available to First Responders, EMT-Basics and Paramedics (does not meet ACLS Requirements)

**This course is recommended by the PA Department of Health, Bureau of EMS for BLS providers who require the formal training required to assist an ALS provider in their duties.

Upon successful completion, certificate of completion will be given to the participant.
